

SMART PORT CHALLENGE 2020

EnvironSens Pte. Ltd. Singapore

We design, manufacture and provide water quality monitoring products and services. Our innovative sensor monitors water quality in real-time and on 24x7 basis. Considering that water storage and distribution systems on ships are complex and could provide conditions for microbial and physio-chemical contamination, continuous water quality monitoring is utmost required. Through our innovative water quality monitoring sensor system, we shall be able to monitor water quality in real-time and could inform the concerned authority to take necessary actions.
