

## SMART PORT CHALLENGE 2020

### Moaah Singapore

Moaah develops enterprise DLT solutions for regulatory compliance and data/asset exchange among multiple protocols and stakeholders. Our products include Document Management System (depository & ML automation, discrepancy resolution) and asset exchange with smart contracts.

Moaah create consensus based permissioned nodes for a company to grant limited & customisable access to the software, allowing autonomous & authenticated exchange of data and assets. Use cases for this may vary, ranging from regulatory compliance (REACH, RoHS, GDPR) to data exchange (including tokenised physical assets using smart contracts).

### Team

**Chu Yun Sil**  
CEO
